Fill iT, FORMiT, Root iT

FORMiT is a product line of Jiffy substrates specially developed for today's modern and highly automated growers in need of a plug substrate able to withstand the rigors of automated handling / transplanting of smaller sized plugs. Jiffy's FORMiT substrate blends contain a special mineral binder providing a binding effect to substrate, keeping the plug together when run through automated transplanters or field planting equipment.

Special tray-filling equipment may be needed to get the optimal binding effect of the mineral binder, especially when used in combination with larger plugs. Smaller plug sizes are the ideal scenario for the different FORMiT mixes available. Jiffy's FORMiT mixes are an ideal solution for veggie growers who produce

young plants in a smaller plug, making use of automatic planting equipment. Due to the stability of the plug, no transplanting shock, and a more economical use of the planting equipment, translates into less losses in the field, less labor re-planting missed spots and ultimately in a higher yield.

For further information or to arrange a trial of FORMiT please contact your local Jiffy representative or use the contact options below

Substrates with added mineral binder - Automation ready -
In-nursery made stabilized media - Suitable for blocking/press pots
