

Jiffypot® R2

Degradable Durability

Patent Pending

The Ultimate in 'Degradable Durability'!

New home compostable pot with added characteristics that make it more suitable and attractive for use in retail market settings.

The original Jiffypot, on the market since the mid 1950's, has proven itself with annual sales of more than 300 million pots worldwide, being the market leader in biodegradable containers for more than 60 years.

The Jiffy R2 has kept most of the original 'Jiffypot' characteristics, using peat and wood pulp as main ingredients. What is different from the original pot is an added characteristic, keeping the pot dry, even though it is exposed to water or humid substrate. The dryness of the container, persists for a period depending on the ambient humidity, irrigation, substrate and temperature, however, Jiffypot R2 maintains its rigid form and clean surface long enough to produce herbs, bedding plants, or any other plant to be sold to the retail market in a 100% biodegradable container offering the ultimate in '**Degradable Durability**'.

The Jiffypot R2 can be considered as an alternative for any plant currently grown in a plastic pot.

Jiffy®

It's all about the roots

Jiffypot® R2

Degradable Durability

Patent Pending

Jiffypot R2 has the following advantages

In Production:

- Easy to use in automatic dispensing equipment
- Due to maintained rigid form, automatic spacing is possible
- Rigid form makes packing easier
- No nitrogen binding
- No growth of mold or fungus
- No root spiraling due to coarse surface of inner pot

In Retail:

- Clean appearance
- Pleasant to touch, no dirty fingers
- No need to remove pot when planting
- No transplant shock, healthier plants
- No plastic waste
- Sustainable gardening
- 100% home compostable in garden soil or home compost bin

The Jiffypot R2 is available in more than 30 different sizes and designs. Most Jiffypots are linked to a suitable tray - easy handling is thereby ensured.

For further information or to arrange a trial of Jiffypot R2 please contact your local Jiffy representative or use the contact options below

Jiffypot R2 is 100% degradable. Jiffy bio-products are earth-friendly, non-toxic and provide producers of horticultural products economical alternatives to plastic and other bio-like products
