

# Jiffy-7C<sup>®</sup>

## NURSERY

Jiffy-7C series of pellets have been designed to aid the grower in propagating under stressful climatic conditions to avoid water logging of the rooting media. Jiffy-7C offers the convenience of the proven Jiffy-7 "media" and container in "one" system combined with the benefits of a highly aerated and easily drainable coir substrate.

**Jiffy<sup>®</sup>**

*It's all about the roots*

### Optimal air/water ratio

The Jiffy-7C has been developed by Jiffy to provide maximum air porosity resulting in fast rooting of nursery stock.

The high porosity of the Jiffy-7C gives these pellets superior drainage properties and will make for trouble-free irrigation of even the toughest plant variety in the nursery.

### Quality:

The Jiffy-7C is manufactured under Jiffy's stringent quality requirements meaning all substrate used undergoes strict cleaning and structural optimization standards that will make each Jiffy-7C pellet a stable and controlled environment for propagation of all kind of plants from seeds, cuttings or tissue culture.

### Faster sticking and potting

The fast expansion of the Jiffy-7C translates into fast and easy sticking of cuttings. Being enclosed in a minimal netting, allowing optimal root development and root penetration at the same time providing adequate strength to support the root ball during handling shipping and transplanting secures no transplant shock and less losses.

### Mechanical handling

The Jiffy-7C pellet is designed with mechanical handling of the product in mind. The pellets expand rapidly and are well suited to run through an Expandomatic, automatically expanding the pellets ready for use.

Thanks to the netting securing the root ball of the rooted material to stay intact during handling and transplanting, nursery stock producers will have the opportunity to make use of transplanting equipment previously unsuited to this sector.

### Environmentally friendly

If a peat-free alternative is required for any propagation job, the Jiffy-7C will be the obvious choice to any propagator of nursery stock as Jiffy-7C is derived from pithy tissues of coconut husks, a renewable and environmentally friendly material.
