

# Jiffy-7®

## Increased Returns

Jiffy-7 offers growers quicker rooting due to the air-pruning of roots which stimulates strong, fibrous root development within the plug. This can result in a decrease in crop cycle times of up to 25% in addition to producing stronger, more compact plants.

Unlike other discrete plugs, Jiffy-7 is supplied in a dried compressed form allowing the grower to store un-used plugs until the next crop cycle without wastage. Efficient storage on the nursery is also a benefit as the Jiffy-7 occupies less than one quarter of the space of other discrete plugs.

The plugs are easily re-hydrated by hand or during the normal irrigation cycle.

## Convenience

All Jiffy-7 sizes feature a pre-formed soft centre for easy insertion of even the smallest cuttings. The fully enclosed capillary net allows easy mechanical or manual handling of the plugs without loss of substrate and extends the transplant window.

All Jiffy-7 plugs contain a specially formulated fertiliser to provide the best start for your young plants. Short term crops need no further feeding before potting on.

Polyroll offers unrivalled convenience by providing plugs pre-spaced on a perforated polythene or capillary fleece underlay. Plugs are spaced to the growers requirements and the length and width of the underlay can be made to fit individual benches ensuring maximum use of bed space.

All pellet-pack trays feature a picture label slot to allow secure attachment of a label without damaging a plug.

## Extensive Range

Six plug sizes available from 18mm to 44mm diameter either loose in cartons or pre-loaded in a range of growing trays. Tray options range from 25 cell strips to 144 cell full size growing trays. Plugs can also be pre-spaced in the growing trays ensuring there is a Jiffy-7 solution to suit all crops and growing requirements.

All trays feature the unique Jiffy air-prune design, which ensures the plug is held firmly within the cell whilst still allowing free air movement around the plug, minimising root diseases and maximising root development.

## Environment

Jiffy-7 Pellets are manufactured from sphagnum peat (and Coir fibres) harvested from carefully selected bogs which are subject to stringent internal and governmental controls to ensure minimal environmental impact. Peat is only taken from sources where the re-generation rate is greater than the harvest rate and the local ecology will not be adversely affected. The addition of 25% coir fibres makes Jiffy-7 suitable for reduced peat production.

**For further information or to arrange a trial of Jiffy-7 Plugs please contact your area manager or use the contact options below**

Jiffy-7 is used by growers worldwide and has proven itself over many years to be a clean and cost-effective propagation substrate for a wide variety of crops and cultural regimes. **Now with increased air porosity for easier water management and faster rooting.**
