

## Orchid Plug Propagation System

The Preforma Orchid Plug Propagation System is a six step concept developed by Jiffy to assist Orchid growers.

1. The orchid plug is a split plug produced in a filling tray (72 cavities)
2. Filling tray will be delivered to the grower together with a separate growing tray
3. Grower transfers the split plug out of the filling tray by pushing it up from the bottom
4. Place the TC of the orchid in the open split
5. Place the closed split plug + TC in the transparent growing tray
6. The Orchid plug fits perfectly in the tray cup and roots will penetrate the plug as on unit.

**For further information or to arrange a trial of the Preforma Orchid Plug, please contact your sales manager or use the contact options below.**

All *Preforma plant plugs* are made from high quality substrates produced under stringent Jiffy quality control and feature excellent humidity levels, air permeability and stability.

## Benefits of Preforma Orchid Plug

- Uniform Substrate
- Air plug
- Easy water uptake
- Quick growth
- Saving 25% to 40% in growing time
- No transplant shock
- Plug grown in separate unit from the start, making selecting and potting easier and faster
- Minimizes cross rooting of plants due to the cell depth of the tray
- No root damage due to specially developed tray in combination with plug
- More uniform growth after potting
